## Main Control Unit / Transmitter

- Send audio and video signals to different locations around the home via 2.4GHz wireless technology
- Watch up to two different sources at the same time in different locations around the home. Connect up to five sources to the Main Control unit – DVD, DVD-R, Satellite, Games Console etc
- Handy front panel input giving easy connection to infrequently viewed / used sources such as Camcorder, Digital Camera, Games Console etc.
- Record all connected sources without interruption whilst viewing up to two additional sources
- Parental Control / On Screen Display to all locations. Control what is being viewed and accessed in all locations. Lock out sources that you do not want viewed in secondary location
- Automatic switching – unit will automatically switch to most recently powered on source
- Manual switching – override the auto switching to utilise the remote control manual switch
- RGB compatibility on all scart sockets providing the best possible picture a scart can offer
- Digital Audio Capability on all inputs – giving superior sound quality, when transferring to an Audio Visual amplifier
- Digital Coaxial to Digital Optical internal conversion

## Secondary Unit / Receiver

- Connect to a secondary television in another location (Bedroom, kitchen etc)
- Connect an additional source (Games Console etc) to the secondary unit
- Add additional receivers to the system

## Remote Control

- Select all connected sources from any designated location via the system remote control
- Control all connect sources with the sources own remote control via the IR transmitter

**PLUG 'n' VIEW** wireless home installation kit
